RE: 2022 Infiltration and Inflow Report  
WA0023639

Dear Ms. Cholski:

Enclosed you will find the 2022 Infiltration and Inflow Report for the Salmon Creek Treatment Plant prepared by Clark Regional Wastewater District (District). This report is being submitted as required by the NPDES Permit No. WA0023639.

If you have any questions, please contact me at 360.993.8815 or by email at [hhenderson@crwwd.com](mailto:hhenderson@crwwd.com).

Sincerely,

Heath Henderson, PE  
Engineering Director

Enclosure

Appendix D - ERU and Sewer Line Data

# 2022 Infiltration and Inflow Report

## Overview

---

The Clark Regional Wastewater District (District) was formed in 1958. The District has always maintained a comprehensive construction specification, inspection and maintenance program to minimize infiltration and inflow (I/I) into the system. As a result, the system flow characteristics perform well below the non-excessive criteria as established in the EPA Infiltration/Inflow Analysis and Project Certification (Ecology publication 97-03).

Beginning in 2016, the District began conveying a portion of the flow generated in the City of Ridgefield service area to the Salmon Creek Treatment Plant. Currently, all flow tributary to the Pioneer Canyon Pump Station is conveyed through the Discovery Corridor Wastewater Transmission System and ultimately to the Salmon Creek Treatment Plant. The average daily flow from the Pioneer Canyon Pump Station is about 0.61 MGD (3,695 Equivalent Residential Units (ERUs)). The Ridgefield Treatment Plant processes the remaining flow generated in Ridgefield. The additional flow to Salmon Creek is incorporated into this report.

### ANALYSIS

The District's average dry weather and wet weather I/I rates are well below excessive. Average dry weather flows greater than 120 gallons per capita per day (gpcd) indicate excessive infiltration. Infiltration occurs during periods of high seasonal groundwater and dry weather with little or no rainfall. The District's infiltration remains well below excessive at 71 gpcd. Average wet weather flows greater than 275 gpcd indicate excessive inflow. Inflow occurs during periods of wet weather with significant rainfall resulting in ponding and surface runoff. The District's inflow remains well below excessive at 125 gpcd.

For the purpose of this report, population calculations have been based on population equivalents. This method calculates a population based on the total number of ERUs multiplied by the planning assumption of people per ERU. This assumption is 2.43 people per ERU for the Salmon Creek Treatment Plant (CH2M HILL, 2004 SCTP Phase 4). The calculation for population equivalent includes commercial and industrial ERUs in addition to residents of the area. At the beginning of 2022, the District had approximately 43,660 ERU's with a population equivalent of roughly 106,093 in the Salmon Creek tributary area, which includes the City of Ridgefield, with 3,384 ERUs, or a population equivalent of about 8,222.

As shown in Appendix A, the District's 2022 I/I of 1.57 MGD represents a 43% increase compared to the 2003 base year. Note that this base year has been used for many past I&I reports and to better understand I/I trends in the system, given various changes in the system configuration over time, the District reviews the average monthly flows and rainfall for the available records between January 1997 and December 2022. That data shows that 2000, 2013 and 2019 represent the lowest I/I years on record. The I/I for 2019 was the same as 2013, with 5-inches more rainfall. In 2022, the area received about 2.5-

inches less rain than 2021 with slightly higher system flows resulting in a total I&I of 0.42 MGD less than 2021. The District's I/I averaged 1.56 MGD over the past 25 years, which is nearly equivalent to 2022 I&I of 1.57 MGD. Reviewing more recent years with similar rainfall patterns and flows, the 2022 I/I does not appear to be out of trend with historical performance. Also, the excessive inflow and infiltration calculations do not indicate that the system is experiencing higher than normal I/I.

TABLE 1

**1997-2022 I/I AND RAINFALL**

Year	Min of Average Monthly Flow (MGD)	Max of Average Monthly Flow (MGD)	I / I	Annual Rainfall
1997	3.9	5.73	1.84	48.18
1998	4.27	5.48	1.22	45.73
1999	4.2	5.92	1.72	43.87
2000	4.41	5.23	0.82	32.89
2001	4.39	5.74	1.35	36.41
2002	4.34	5.53	1.19	34.01
2003	4.63	5.72	1.1	41.02
2004	4.77	5.94	1.17	35.21
2005	4.79	5.9	1.11	34.82
2006	4.92	7.04	2.12	42.96

2021	6.41	8.40	1.98	35.09
2022	6.58	8.15	1.57	32.62
Average			1.56	36.44

# Monitoring Program and Rehabilitation Projects

---

## **INTRODUCTION**

The District places an emphasis on good design and inspection to minimize I/I into the system. However, as pipes age, a variety of methods for the monitoring and identification of I/I are necessary to use. This includes yearly review of pump station records, treatment plant flow reports, trunk line flow monitoring, visual inspection of manholes and closed-circuit television (CCTV) camera inspection. Through these efforts, the District is able to locate areas of concern for follow-up investigation and correction.

## **CROSS-CONNECTIONS**

For issues on private property (i.e., stormwater cross connections, roof drains or broken laterals), the District contacts the homeowner and works with them to correct the situation. The District typically addresses issues that are within public right-of-way. All side sewer connections (between right-of-way and building envelope) are permitted and inspected by the District.

## **NEW CONSTRUCTION**

The District addresses I/I by inspecting all new systems during construction, including all mainlines, manholes and individual laterals. In addition, during plan review and field inspection, the District reviews the need for inflow dishes or watertight locking lids to control inflow. The District addresses infiltration by requiring manhole joints to be externally sealed in areas of high groundwater, vacuum testing of 50% of all new manholes and air testing of all new gravity mainlines. The District also requires newly constructed systems to be plugged during active site construction to reduce inflow of stormwater or construction debris.

## **FLOW MONITORING**

The District monitors all pump stations as well as four (4) motor operated valves (MOV's). Daily and annual review of the pump run times and flow data help to identify the potential for I/I. In addition, the two satellite service areas (Meadow Glade and Hockinson) that are served by STEP systems have individual flow meters at their termination.

## **REHABILITATION**

The District strives to inspect all gravity mains and trunk sewers with CCTV cameras a minimum of every eight years to assess condition, I/I and other related issues. The District also performs regular inspections of over 80 pump stations. Results help inform the District's Capital Program, which includes a "Repair" program component. Approximately \$1 million is budgeted for this program on an annual basis. Both programs provide for completion of specific projects targeting the reduction of I/I in the system as well as overall system performance. Types of projects include:

- Sewer mainline and lateral lining projects – CCTV inspections reveal pipe defects such as cracks, holes, and root intrusion which create avenues for I&I. These

projects are typically advertised for bid and completed by experienced contractors. In 2022, 7,700-ft of pipe was lined through the Cougar Creek Trunk Lining Project and the 2022 Lining Project (various locations).

- Spot repair projects – CCTV inspections of pipe as well as routine maintenance inspections on pump stations can reveal pipe and/or structure connection deficiencies that result in I&I. These projects are either advertised for bids or completed by District crews depending on the project scope.

The District completed multiple lining efforts and spot repair projects in 2022. The District is planning lining and spot repair efforts on over a dozen locations in 2023.

## Salmon Creek Wastewater Management System - Clark Regional Wastewater District

### ANNUAL INFILTRATION/INFLOW REPORT

1/1/2022 to 12/31/2022

#### DETERMINATION OF NON EXCESSIVE INFILTRATION

EPA Infiltration Criteria                      120 gpcd  
  
District Infiltration                                71 gpcd

Period	Flow	Rain	Population Equivalent
<b>Mar 24</b>	<b>8.01</b>	0.00	106856
Mar 25	7.71	0.00	106856
Mar 26	7.71	0.00	106856
Mar 27	7.89	0.00	106856
Mar 28	7.35	0.00	106856
Mar 29	7.41	0.00	106856
Mar 30	7.14	0.00	106856
<b>Average Flow (MGD)</b>	<b>7.60</b>	<b>0.00</b>	<b>Inches Rain</b>

**Comments:** The seven day period of March 24 through March 30, 2022 is identified as a dry weather period within a period of seasonal high groundwater.

#### DETERMINATION OF NON EXCESSIVE INFLOW

EPA Inflow Criteria                                275 gpcd  
  
District Inflow                                        125 gpcd

Period	Flow	Rain	Population Equivalent
Dec 25	9.43	0.21	109354
Dec 26	10.64	2.01	109354
<b>Dec 27</b>	<b>13.65</b>	0.46	109354
Dec 28	11.52	0.00	109354
Dec 29	10.45	0.72	109354
Dec 30	10.41	0.21	109354
Dec 31	9.94	0.03	109354
<b>Highest Average Flow (MGD)</b>	<b>13.65</b>	<b>3.64</b>	<b>Inches Rain</b>

**Comments:** The seven day period of December 25 through December 31, 2022 was identified as a period of significant rainfall with surface ponding and runoff. December 27 was the highest recorded daily flow during a storm event.

## Salmon Creek Wastewater Management System - Clark Regional Wastewater District
